KENJI KAWASHIMA

DEVOPS & CLOUD INFRASTRUCTURE ENGINEER

Tokyo, Japan | k12major28k@gmail.com | linkedin.com/in/kenjikawashima-637a7a194

PROFESSIONAL SUMMARY

DevOps and Cloud Infrastructure Engineer with 5+ years of experience, including 4 years of hands-on AWS and Linux production operations. Operated a PCI DSS-compliant payment gateway processing about 10,000 transactions per minute, maintained about 100 Jenkins jobs, and led a zero-downtime CentOS 7 to Amazon Linux 2023 migration. Strong in CI/CD, IaC, containers, and security, with experience in payments and e-commerce.

CORE SKILLS

AWS	EC2, ECS, Fargate, Lambda, API Gateway, Step Functions, S3, SQS, EventBridge, CloudFront, VPC, IAM, Cognito, WAF, Inspector
Linux / Middleware	Amazon Linux, CentOS, Ubuntu, Nginx, Apache, MySQL
IaC	CloudFormation, AWS CDK (TypeScript), Ansible
CI/CD	Jenkins, CodeBuild/CodeDeploy, GitHub Actions, Blue/Green deployment
Containers	Docker, ECS on Fargate
Observability	CloudWatch, Datadog, Zabbix, Fluent Bit, AWS Config, Elastic Agent
Incident Response	Opsgenie, Slack, on-call operations
Scripting	Bash, Python, JavaScript
Version Control	Git, GitHub, Bitbucket

PROFESSIONAL EXPERIENCE

Cloud Infrastructure & Security Engineer | Avanade K.K.

Apr 2025 – Present | Tokyo, Japan

- Designed AWS architecture for a public-sector ICT refresh (about 4,100 users, 30 servers, 50+ sites): accounts, network, identity, CSPM, migration approach, and cost estimates.
- Proposed an IaC approach (Terraform, GitHub-based CI/CD) for the AWS landing zone, networking, and centralized logging.
- Coordinated technical issues across 11 development divisions as part of a cross-project architecture governance team.
- Ran Entra ID and Intune tests; created 53 operation scenarios.
- Collaborate daily in English with global colleagues through meetings and chat.

Cloud & DevOps Engineer | Self-Employed

Nov 2024 – Mar 2025 | Japan

- Designed and built AWS infrastructure for a global security vendor's SOC modernization PoC: two containerized services on ECS Fargate, VPC, IAM, Amazon Cognito, and CloudWatch Logs.
- Proposed and implemented IaC with AWS CDK (TypeScript) and CloudFormation to prepare for future service operation.
- Implemented Python-based API integrations with security products (Palo Alto, Cortex XDR, Microsoft Defender).
- Troubleshot missing and delayed logs by tracing IAM permissions, network restrictions, and end-to-end data paths.
- Clarified changing PoC requirements step by step using questionnaires, and shared knowledge with a 12-member team.

DevOps & Site Reliability Engineer | NRI Netcom K.K. (NRI Group)

Nov 2022 – Oct 2024 | Osaka, Japan

Project 1: Payment gateway for the game industry (PCI DSS, production)

- Operated AWS production for a PCI DSS-compliant payment gateway integrating multiple payment methods (about 10,000 transactions per minute).
- Handled on-call incident response by phone and Slack (3–5 production incidents per week, average recovery under 30 minutes), using log analysis for root-cause investigation.
- Monitored production systems with Zabbix (payment gateway) and Datadog (POSA platform), and managed alert notifications with Opsgenie.
- Managed access and application logs with CloudWatch and S3 to meet PCI DSS requirements.
- Built a log collection platform with Fluent Bit.
- Managed IaC for eight environments (CloudFormation, Ansible); cut provisioning from several days to about half a day.
- Contributed to configuration drift detection with AWS Config, detecting differences between IaC definitions and actual AWS resources.
- Built CI/CD with Jenkins and shell scripts; maintained about 100 Jenkins jobs, including release automation.
- Built a PCI DSS v4 CSP-report storage platform with API Gateway and Lambda.
- Tuned AWS WAF rules across six environments and ran weekly vulnerability triage (Amazon Inspector, Vuls).
- Reported system status and vulnerabilities to the customer in weekly meetings.

Project 2: Global POSA code-management platform (sub-lead)

- Led a zero-downtime migration of Jenkins servers from CentOS 7 to Amazon Linux 2023 through planning, announcements, and rehearsals (parallel run).
- Performed Blue/Green deployments and improved CodeBuild/CodeDeploy flows for ECS.
- Migrated six EC2 batch jobs to Step Functions and ECS, and replaced a self-managed Nginx proxy with API Gateway.
- Changed Apache configurations and added subdomains.
- As sub-lead of a five-member team, reviewed and supported team members' work.

Full-Stack Software Engineer | Logical Arts K.K.

Apr 2021 – Oct 2022 | Fukuoka, Japan

- Developed and released features for an AWS-hosted e-commerce platform (Laravel/PHP, Vue.js, Nginx, MySQL, Amazon Linux), including multi-year licenses and FAQ integration.
- Built Bash batch processing that reduced manual email work from about five minutes per email to near zero.
- Moved from developer to project owner; handled customer negotiation, estimates, and progress management.

CERTIFICATIONS

AWS	• DevOps Engineer – Professional (2025) • Solutions Architect – Professional (2021, renewed 2024)	• Security – Specialty (2024) • SysOps Administrator – Associate (2022) • Developer – Associate (2023)
Microsoft	• Azure Security Engineer – AZ-500 (2025) • Identity and Access Administrator – SC-300 (2025)	• Azure Administrator – AZ-104 (2026) • Security Operations Analyst – SC-200 (2026)
IPA Japanese National IT Exams (passed)	• Information Security Specialist (2023) • Applied Information Technology Engineer (2023)	• Database Specialist (2024)
